## SPRINKLER METERS

### **Water Utility Customers:**

All Water Utility customers have the option of installing a “Sprinkler Meter” which is used to track outside water usage that does not run through the sewer system during the summer months. These meters are read once a year in the fall and the amount of usage is credited to your sewer portion of your bill at the rate of \$3.50 per 100 cubic feet.

“Sprinkler Meters” are to be purchased by the customer at a one time cost of \$70. The customer, with the assistance of a Water Dept. employee, will select the most effective placement for meter installation. The meter will be tested for accuracy before installation, and the necessary adaptors needed for meter attachment to an outside faucet will be provided by the Village.

The customer will be responsible for the removal and storage of the meter over the winter months. Please contact the Village Shop at 327-8062 if damage occurs. A Water Dept. employee will install replacement parts and retest any damaged meters before they can be used for the next season. The cost of any repairs and testing of the meter due to damage caused by customer error or freezing, will be billed to the customer.

To purchase a sprinkler meter contact the Village Hall at 327-4294.
